

WaterXcite AGRO

Make dry land fertile!

Save up to
50% irrigation.

During the use of the WaterXcite AGRO (standard steel) a bio energetic effect changes the floor bonding capacity of air humidity.

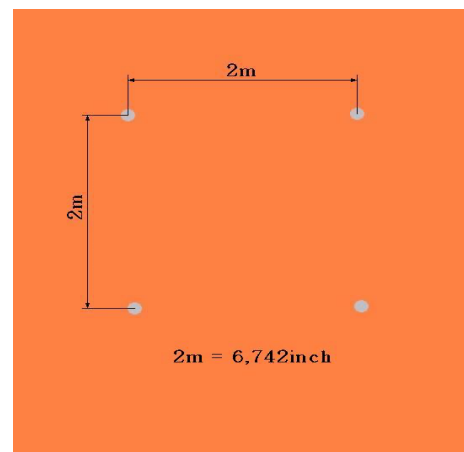

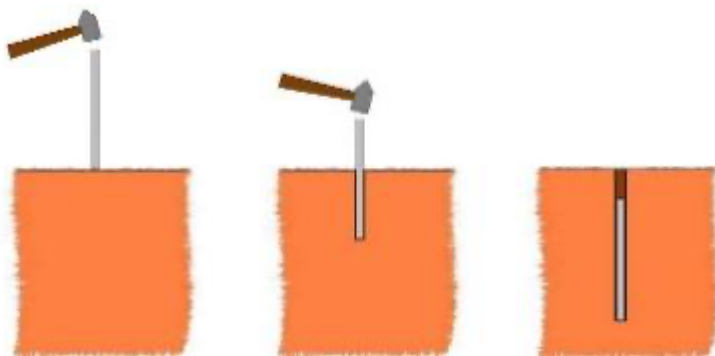

How does the WaterXcite AGRO work ?

The simple steel stick will make an oscillation in the earth. It will take 3 month and the earth will also oscillate. With this oscillation the air humidity which is everywhere present will differ into the ground in interaction with plants

and will source the earth with humidity. This will save irrigation up to 50%. The oscillation is harmless for human, the earth, and plants.

Application:

Place the WaterXcite AGRO every 2m (6 ft) in the ground.

The depth of the stick depends on what you are planning to do with the acre, floor or ground you place the stick into.

We recommend 10 cm (4 inch) for grass, 20cm (8 inch) to 30cm (12 inch) for grounds you are going to plough or more.

It approximately lasts 2 to 3 months till the full effect of the WaterXcite AGRO has fully spread in the ground.

Metal stick: (diameter: 0.4-inch, length: 8-inch, weight: 5 oz) effect for 40 sq ft (4m²).

Studies for mor than a year in Burkina Faso, Emirates, Malta, and Thailand have proven 50% less water needed.
